1. Introduction

Travelogues are records of how a tourist feels about a place that he/she has visited. Though there is a great advancement in technology in the recent times, text-based travelogues are always precious. In our android application – "MEMORIES", a user can log in and pin the different places visited, add a personal description and details about them and associate photos from the gallery with each memory.

The user can capture all precious travel moments and adventures in this nifty travel journal app. Memories helps you store all important details of your travels in one place making it easier to revisit and relive those moments of your journey anytime, anywhere.

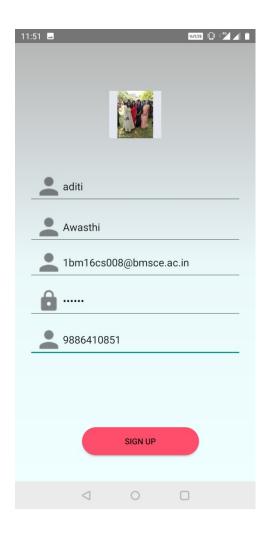

2. User-Interface screen shots and description

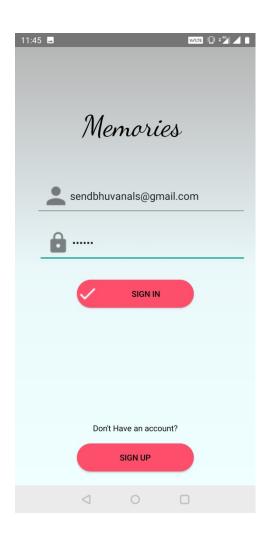

a) Welcome screen: It is a splash screen that utilizes a thread to display for a while. It shows the logo and the name of the application.

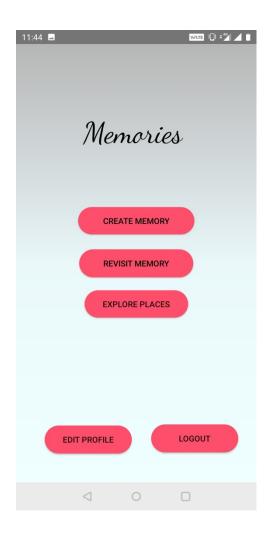

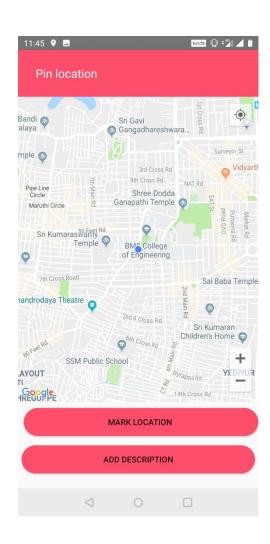

- b) Sign up: User must create his/her account after installing the application. Employs firebase services.
- c) Sign In: User signs in by entering email address and password which is authenticated through firebase services.

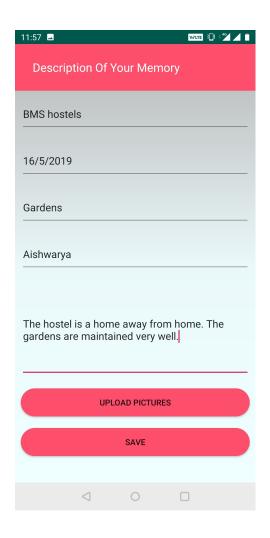

- d) Menu for various activities: Create Memory, Revisit Memory, Explore Places and Edit Profile options are available which lead us to different activities.
- e) Pin location: This displays a Google map and marks the current location using Google Maps API. There are "+" and "-" buttons to zoom in and zoom out. There is a current location pointer button to display the current location on the map. The save button pins the current location and saves it in the Firebase database.

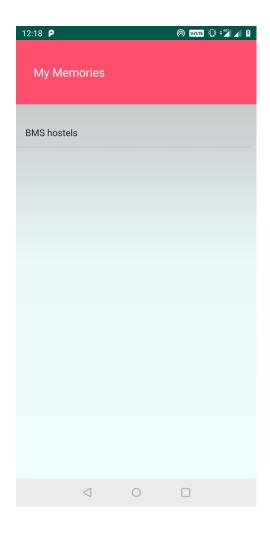

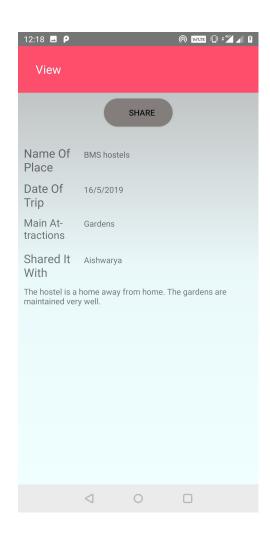

- f) Description: Allows us to enter various details about that location like the name, date and time of visit and journal entry and these details are stored in Firebase database.
- g) Attaching pictures: This allows the app to access the gallery and associate the photos taken at the location with the memory itself.

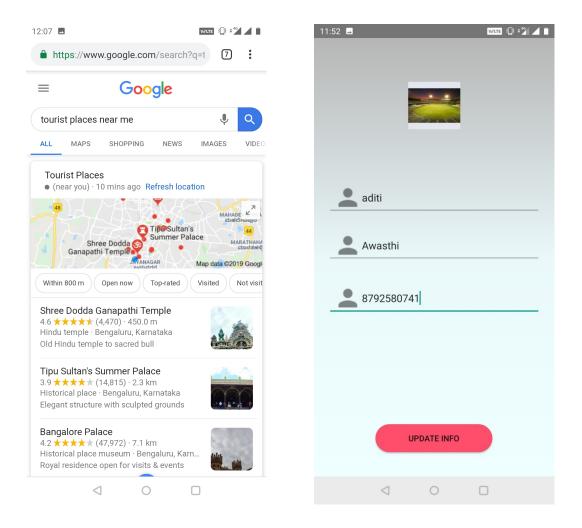

h) Revisit memory: Shows the list of memories belonging to the signed in user and allows the user to view details of each memory.

- i) Explore Places: User can view nearby places of attraction by browsing the web using Google Chrome.
- j) Edit Profile: Allows users to edit their name, profile picture and contact details.

k) About Us: Provides the list of developers involved in the project.
